

DANIEL OLAPADE

Engineer-in-Training (EIT)

olapadedaniel99@gmail.com | 431-996-6910 | Toronto, ON | [linkedin.com/in/danielolapade](https://www.linkedin.com/in/danielolapade)

PROFESSIONAL SUMMARY

Biosystems Engineer (EIT) specializing in data-driven process optimization to reduce costs and improve yield. Delivered \$10,800 in annual savings through iterative engineering design. Data analytics and CAD are my tools — measurable results are my output.

TECHNICAL SKILLS

- **Process & Systems:** Lean Principles, Root-Cause Analysis (8D, 5-Why, Fishbone), P&IDs, NFPA 69
- **Quality & Validation:** ISO 9001 (CAPA, Audits), SPC (Cp/Cpk, Minitab), FMEA, GMP Standards
- **Design & Modelling:** SolidWorks (Assemblies, BOMs), Inventor, DFM, Rapid Prototyping (3D Printing)
- **Data & Automation:** Python (Pandas, NumPy, Matplotlib, Selenium), SQL, Power BI, R, MATLAB

EXPERIENCE

Field Engineer, Explosion Protection Systems | Fike Corporation

Dec 2024 - Present

- Validate EPACO systems during pre-commissioning against NFPA 69 and design specifications, identifying deficiencies to ensure compliance
- Analyze EPACO system failures across 50+ client sites using 5-Why methodology and diagnostic data (sensors, control logic, suppression hardware) to recommend corrective actions
- Develop compliance documentation and client training covering inspection, audit, and operational standards

Research Assistant | Biomaterials Lab (U of M)

Jan 2024 – Jun 2024

- Evaluated 7 foam dressings against compatibility criteria, identifying optimal materials for biosensor integration
- Designed CAD-based test apparatus to simulate wound conditions (temperature, pH, moisture) and validate real-time biosensor response to biochemical stimuli in ex vivo models

Engineering Co-op (R&D) | Agnora Inc.

Aug 2022 – Dec 2022

- Designed and prototyped gravity-fed filtration system through 5 iterations, validated frit particle removal efficiency (0.1–0.2 microns) and projected \$10,800 annual cost reduction in ceramic printer operations
- Analyzed 20+ laminated glass makeups per ANSI Z97.1 across climates, establishing material selection specs
- Optimized tempering recipes to eliminate edge kink and roller wave defects, achieved 100% yield on 64-unit run

Engineering Co-op | Linde

May 2022 – Aug 2022

- Re-engineered cylinder requalification workflow by eliminating redundant steps and optimizing routing, validated via process flow analysis to achieve full federal and internal regulatory compliance
- Developed SQL quality management system to track 5,000+ cylinder lifecycles, automating failure trend analysis and eliminating manual documentation across quality control operations

EDUCATION

Bachelor of Science in Biosystems Engineering — Biomedical/Biomaterials

June 2024

University of Manitoba, Winnipeg, MB

PROJECTS

ClauseFinder: Engineering Standards Search Tool | Python, Streamlit, PyPDF2, NLP

- Built ClauseFinder to eliminate manual searching through engineering standards — ranks clauses by relevance, auto-scrolls to exact matches, and exports mandatory requirement checklists

Senior Capstone: Aviation Fuel Exhibit | Python, SolidWorks, Actuators, Microcontrollers

- Co-designed an interactive tactile exhibit for RAMWC to demonstrate aviation fuel energy density and emissions tradeoffs, delivering a functional prototype within a \$3,000 CAD budget
